

Author	Poster title	Poster number
BOUCHELAGHEM Zahia	Investigation of glycerol and Tween - 20 on bovine testicular hyaluronidase catalytic activity by capillary electrophoresis complemented with microscale thermophoresis fluorescence signal monitoring	1
CALIO Antonino	Unravelling the mechanisms of adaptation to high pressure in proteins	2
CARVALHO DE GOES Andre Venancio	High Macromolecular Crowding in Liposomes from Microfluidics	3
CHENAL Alexandre	Effects of molecular crowding on a bacterial toxin: from secretion to host cell hijacking	4
DA VELA Stefano	Requirements and challenges for detailed structural studies by small-angle X-ray scattering experiments in crowded conditions	5
DE LUCA Giuseppe	Deciphering LLPS phenomena during spontaneous amyloid self-assembly in micron-scale compartments by quantitative microscopy techniques	6
GRASSMANN Greta	A computational approach for biomolecular binding characterization: TDP-43 -terminal fragment aggregation in ALS	7
HAMACEK Josef	Modulating Enzymatic Kinetics in Crowded Environment	8
HAUTKE Alexander	Cellular ATP levels govern condensation and mobility of CAG triplet repeat-containing RNAs inside cells – Workshop on New Frontiers in Molecular Crowding	9
LOEWE Maryna	Genetically-encoded sensors for measuring macromolecular crowding at the lipid membrane interface	10
MOELLER Johannes	The Materials Imaging and Dynamics Instrument at European XFEL	11
MORANDO Maria Agnese	Development of non toxic bio-adhesives for wet environments	12
OLGENBLUM Gil	Mechanism of Protein Stabilization in Sugar Glass	13
PITTAS Theodoros	Cell wall damage increases macromolecular crowding effects in Escherichia coli	14
POLLAK Roland	Pseudoisocyanine as a probe for self-assembly under crowded conditions and phase separation	15
SMELLER László	Different concentration effect of molecular crowding on proteins and nucleic acids	16
TULLY Mark	Recent development in 3D printed microfluidic devices & tools for structural biology applications	17
